Agenda

- **What is Large Scale JavaScript?**
 - How Large is Large?
 - What's Wrong with JavaScript?
 - DOM-Centric Development
 - JavaScript Libraries vs. Frameworks
 - Impact of Rich JavaScript Applications
 - The Solution
 - Meta-Languages

How Large is Large?

Small

10K+

Focused

12 Members

Decoupled

6+ 'Modules'

THIS CAN BE APPLIED TO **ANY SIZE**
APPLICATION

BUT IS MOST USEFUL FOR LARGE
JAVASCRIPT CODEBASES

“

Everything should be made as
simple as possible, but not simpler.

”

— Probably Albert Einstein

JAVASCRIPT ISN'T DESIGN FOR SCALE

The phrase "Script" is a clue

JAVASCRIPT IS MISSING KEY FEATURES

**LACK OF
PACKAGING**

**TOO EASY TO USE
GLOBAL NAMESPACE**

**PROTOTYPICAL
INHERITANCE**

**IMMATURE
TOOLING**

What is Wrong

```
$(document).ready(function () {  
  $(".btn").click(function (e) {  
    // Some Code  
  });  
  
  $(".audio").audioPlayer();  
  
  $("#myDialog").dialog();  
  
  $(".approve-comment").click(function (event) {  
    var id = $(event.target).attr("commentid");  
    $(event.target).hide();  
    $.post('/stories/approvecomment?commentid=' + id)  
      .success(function (data) {  
        if (data) {  
          $("#change-status-" + id).text("Comment approved!");  
          $("#change-status-body-" + id).hide(500);  
        }  
      })  
  });  
});
```

More
Lines

JavaScript Callback Hell

```
$(document).ready(function () {  
  $(".btn").click(function (e) {  
    $.get("/foo", function (r) {  
      if (r.success) {  
        $.get("/bar", function (b) {  
          if (b.success) {  
            $.post("/quux", { id: 1, body: "nested" }, function (p) {  
              if (p.success) {  
                alert("Wahoo!");  
              } else {  
                log("bad things happen to good coders");  
              }  
            });  
          }  
        });  
      }  
    });  
  });  
});
```

Whaaaaa!

FRAMEWORKS AND LIBRARIES

They aren't the same

FRAMEWORKS

KNOCKOUTJS

ANGULARJS

BACKBONE

EMBERJS

SCALABLE JAVASCRIPT IS NOT A
PRODUCT OF A FRAMEWORK

BUT FRAMEWORKS CAN MAKE IT
SIMPLER TO BUILD

The Solution

Maintainable

Modularized
Separation of Concerns

Scalable

Compose-able
Loosely Coupled

Testable

Encapsulate
Test Facades

“DON'T SINGLE PAGE
APPLICATIONS (SPA)
SOLVE THIS FOR ME?”

“

Single Page Applications are a misnomer. Apps should include as many pages as necessary, but no more than that.

”

— Me

Rich Web Applications^{*}

Encourages
Loose Coupling

Longer-lived
'Pages'

Models + Views
+ View^{*}

Focused on Data
Binding + REST

^{} I use this phrase to mean the same thing as SPA without the implied nature of an actual single page*

META LANGUAGES

ES6

COFFEESCRIPT

TYPESCRIPT

DART

EcmaScript 6

```
class Horse extends Animal {  
  constructor(name) {  
    super(name);  
  }  
  
  move() {  
    ...  
    super.move();  
  }  
}
```

CoffeeScript

```
class Horse extends Animal  
  
  constructor: (@name) ->  
  
  move: ->  
    alert "Gallops..."  
    super 5
```

TypeScript

```
class Horse extends Animal {  
  
    // Property (public by default)  
    name: string;  
  
    // Constructor  
    // (accepts a value so you can initialize engine)  
    constructor(name: string) {  
        this.name = name;  
    }  
}
```

Dart

```
class Horse extends Animal {  
  
    // Constructor  
    Horse(this.name);  
  
    void move() {  
        super.move();  
    }  
  
}
```

Summary

- **What is Large Scale JavaScript?**

- The idea of what is 'Large Scale' is subjective but you can use good technique in either case.
- JavaScript alone isn't up to the challenge of large scale problems.
- Good development practices can solve many of the ills of large scale JavaScript.
- The key is to be Maintainable, Scalable and Testable.
- Frameworks and Metalanguages can help, but have to be backed with good development practices!
